

WTF BULLETIN: THE PUMP BEFORE THE DUMP

They want you back in.

Markets are rising. Crypto is soaring. Silver's awake.
And gold? Suspiciously calm.

This is the classic setup:

- They pump risk assets to draw retail money back in
- They push narratives: AI, soft landings, tech cycles
- They rotate quietly into gold and hard assets
- Then they let it all collapse

What happens next?

- A "surprise" event tanks the system
- Paper silver gets crushed (again)
- Crypto loses 60–90% overnight
- Gold suddenly becomes "the only safe asset" — too late for most

This is not a bull market. It's a trapdoor dressed in green candles.

You are not meant to win this game.

You are meant to **provide liquidity for their exit**.

Don't get caught chasing the shine.

Step back. Step out. Step sovereign.

Next move: yours.
